
Aluminium plate bending machine

Manual bending machine details

Manual bending machines can be used to shape metal sheets into boxes and pans in various sizes.

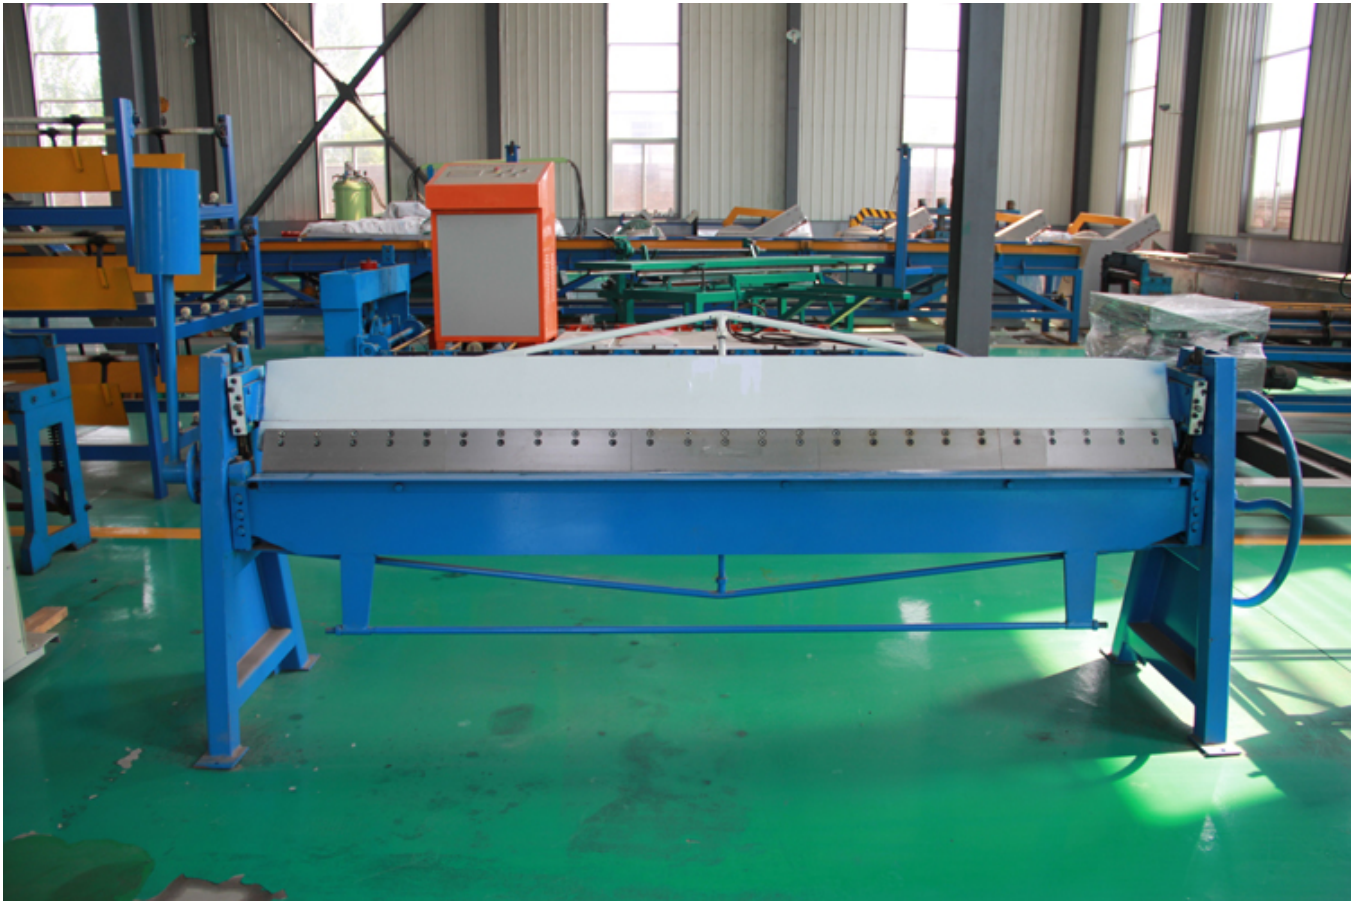

Consumers can choose the machine according the material thickness, processing width of the metal sheets.

We have light type, heavy type and tradition type(American type or European type). Each type can provide different width to be selected. We can do any model, non-standard products according to customer's special requirement.

Technical parameter of manual bending machine

Model	Thickness for mild steel(mm)	Bending Length(mm)	Min. Bending Space(mm)	Weight(kg)	Dimension L.W.H (mm)
HX-1.5*1300 TDF	1.5	1300	200*200mm	390	1800*750*1370
HX-1.5*1300A TDF	1.5	1300	200*200mm	320	1800*750*1370
HX-1.5*2000A TDF	1.5	2000	200*200mm	700	2860*820*1370
HX-1.5*2000 TDF	1.5	2000	200*200mm	780	2860*820*1370
HX-1.5*2500 TDF	1.5	2500	200*300mm	1200	3150*820*1530

Advantages of our roll forming machines

- 1, Our machine can use galvanized steel, color steel plate or aluminum plate as material board.
- 2, Using computer control, PLC display. Therefore the machine is easy to operate, stable and reliable operation, durable, maintenance-free.
- 3, We can manufacture and design various roll forming machines according to customer requirements.

Why choose us?

We have an excellent and professional team;

We accept any drawings or your samples to develop new products;

Any minor problems will be resolved at the earliest possible time;

We always provide relevant technical support, quick response, all your consultations will reply within

24 hours.
