# Flat Steel Straightening Machine

## Our advantages

We are professional! Our factory has extensive experience in product and export processes.

We have an ultra-low price advantage! Our factory helps you save money from many details:

1, lower labor costs

2, convenient transportation

3, perfect supporting industry

Our machine is the best machine! PLC uses well-known brands to ensure high precision and easy operation.

Our machines are fully automatic: you only need to enter the length of the steel plate and the required number of pieces, the machine will run automatically.

## Components of flat steel straightening machine

The equipment consists of 8T simple mechanical decoiler, feeding guide unit, leveling system, cutting system, receiving device, hydraulic system and electrical control systems.

## Flat steel straightening machine Technical

Raw Material	Cold roll/hot roll/aluzinc/galvanized Thickness:0-4mm.
Forming Speed	About 3-6m/min.
Roller Stations	Up 6 down 7, Plus 3 rubber roller before leveling after feeding unit.
Middle Plate	3 rubber roller:20mm; leveling roller:60mm
Power Requirement	Main motor power:18.5kw ;Hydraulic motor power:5.5KW.
Simple Mechanical Decoiler	Max Capacity:8000kgs.
Control System	Delta or Panasonic PLC and converter
Cutting System	Cut to Length after Forming
Voltage	380V/3Phase/ 50HZ or Customized
Dimension	4500*2500*1400
Weight	6000kgs

---

Width

1500mm
