

ASA plastic synthetic resin roof tile

Synthetic resin tile has the advantages of long-lasting color, light weight, self-waterproof, toughness, thermal insulation, sound insulation, corrosion resistance, wind and shock resistance, anti-icing, anti-fouling, green environmental protection, fire prevention, insulation and convenient installation.

Product Description

1	Type	800mm, 960mm
2	Overall width	880mm, 1050mm
3	Efficient width	800mm, 960mm
4	Wave spacing	160mm
5	Wave height	30mm
6	Wave pitch	250mm
7	Thickness	3mm
8	Length	Customized by the multiple of the pitch
9	Color	Red, sky blue, dark green, brick red, black or custom

Advantages of ASA plastic synthetic resin roof tile

- 1, Superior weather resistance. ASA roof tile generally use excellent high weatherability engineering resins and have excellent weather resistance in a natural environment.
- 2, Excellent corrosion resistance. The ASA roof tile has very good corrosion resistance, will not be deteriorated by rain and snow, and can resist corrosion of various chemicals such as acid, alkali and salt for a long time.
- 3, Excellent load resistance. ASA roof tiles have good load-resistance properties.
- 4, Good impact resistance and low temperature resistance. ASA roof tile has good resistance to impact and low temperature.
- 5, Self-cleaning. The surface of the ASA roof tile is dense and smooth, and it is not easy to adsorb dust, and has a "leaf effect". The rain washes out as clean as new, and there is no plaque that is washed away by the rain after the scale is removed.
